Powered by TRACE™ Data

NEVER MISS A TRADE

Trumid's Bond Stream provides a customized, automated, transactional view of TRACE that's easy to use.

How It Works

Bond Stream is a new feature from Trumid that filters TRACE™ data to present a customized feed of the latest trade information about the bonds you're following. Bond Stream presents trade information for all bonds on your Watch List, providing the bond's last traded price, size, and additional relevant information — all in a beautifully simple widget. Additionally, a *Priority Section* is automatically created for bonds you are axed in — just add your axes as IOIs into the Trumid Market Center. With Bond Stream, you can initiate a trading session by clicking the “BID” or “OFR” buttons directly within the widget at the latest TRACE print.
